# Understanding RNA-seq analysis through an example: voting behavior at the French parliament

*Hector Roux de Bézieux*

*May 2018*

## Introduction

### Context

### Loading the data and building an ExpressionSet object

We store the data in an *ExpressionSet* object, where the *phenodata* is the information about the cells (the deputees) and the *featuredata* is the information about the genes (the votes).

### Filtering
